

PRO ARMOUR[®] PLUS

Offering comfort and protection whilst footwear free.

The latest product from Pro Armour, the Pro Armour PLUS provides the same first-class protection as the Lite, giving amputees the ultimate freedom to walk footwear-free.

Thanks to the low profile rubberised sole, users can enjoy more footwear-free activities such as walking along the shoreline of the beach or being poolside. The sock not only provides grip, but the neoprene properties ensure components are protected from ingress of dirt.

Features and Benefits

Splash, sand, dust and dirt proof

Clinicians can be assured that their patient's components are protected from dirt, sand and dust by the lightweight, neoprene material and non-slip sock.

4mm sole thickness

The robust, rubberised non-slip sole gives users confidence in knowing they're safe from slipping on wet and uneven surfaces.

Promotes physical activity and positive wellbeing

The Pro Armour PLUS can give users more flexibility and independence to do what they love most.

Low maintenance - washable & reusable

Simply hand wash with a mild detergent and air dry after every use.

“ The Pro Armour PLUS is a step up from the Lite – users shouldn’t have to think twice about putting their shoe on whilst on the beach or the garden. Knowing their components will be protected gives me, and my patients, great peace of mind! I can’t recommend this enough to my patients!

Prosthetist, New Zealand ”

Foot Compatibility

The Pro Armour PLUS is generally suitable for most SACH, uniaxial, multiaxial, blades, energy storing and patient adjustable feet.

About Pro Armour

Pro Armour was created by adventurer William Pike, who wears a transtibial prosthesis. William was concerned about premature wear and tear of his prosthetic foot whilst on adventures, and developed the Pro Armour range to ensure he could continue enjoying an outdoor lifestyle with peace of mind. The new Pro Armour PLUS was created to allow more enjoyment from footwear free activities.
