evoassist

The evolution of home control and independence

evoassist by Steeper is an innovative application that transforms an iPhone, iPod touch or iPad into a universal environmental control device. Flexible and easy to use, either via touch screen or input switches, evoassist can be configured to best suit individual needs.

Complete integration

Working with the latest Apple technology, evoassist is designed to integrate seamlessly with Steeper's comprehensive range of home automation systems and return a level of independence to users.

Total control

Facilitating a large range of everyday tasks from; answering telephones and opening curtains to raising alarms and unlocking the door. evoassist is designed to offer users independence and easy control of their home on a device that they are already familiar with.

Assistance for everyone

evoassist is available for iPhone, iPod touch and iPad, with the capability of also being displayed on additional or separate screens; serving those with a variety of impairments. The control options can be displayed using either text or clear icons and both audio and visual prompts are available to assist the user in selecting the right function. evoassist also features selectable pre-recorded phrases which can be used as a basic communication device.

Additional video intercom technology

evoassist can be easily connected to a Steeper intercom, giving users more control and safety within their own home. The technology works by transmitting a live video image of the caller at the door to the screen, enabling the user to accurately and safely identify the caller before allowing access to the property.
